

Technology Release

Dear Parents,

We are excited about our summer program as we encourage your child to continue education in the areas of Language Arts, Science, Technology, Engineering, Art, and Music. Using STEAM, they will have fun while learning new information through research and hands-on development.

Research using tech tools will be limited to very short periods of time in a day. To accomplish our goal, we will allow students supervised use of their iPads, laptops, or tablets to search the internet for only educational material regarding the week's theme. This year, we will be doing research on monumental people and things in our world, which includes biblical characters and discussions. At the end of the 11 weeks, children will have a journal/portfolio that shows what they learned along with some story-writing of their own. They may work together in teams or individually as desired. Technology tools will only be used in the morning and will be locked up for the rest of the day to be sent home at the end of that same day. These tools will not be used for gaming or other activities. Teachers will closely monitor students to be sure they are working with age appropriate websites.

We need your consent as follows:

My child is allowed to bring in a laptop or tablet to use for internet research during the Summer Program at RiverTree Christian School and Childcare Center. Any incidence of inappropriate use of the device will be cause for the child to discontinue use altogether. My child will follow strict instruction related to appropriate use of the internet. RiverTree Christian School and Childcare Center is released from liability regarding inappropriate written or visual findings on the child's personal device.
